

Jet Aerobatics Judging Part-Loop Radii – Quick Reference 2020-2021

Shown below is a range of examples selected from the various F3S maneuvers for 2020-2021.

- ⊖ These corners and looping segments must have a constant and smooth radius, or the figure must receive an appropriate downgrade.

The first radius of a manoeuvre does not define the radii for the remaining radii of a manoeuvre but it is a starting point. As the manoeuvre progresses, the judge will compare each radius that was just flown to the last radius flown and if there is a difference, then a downgrade will be given based on the severity of the difference.
